

Hear what our clients are saying about dokXP™ !

“At Burrowes, our scanning solution is dokXP from Keal. This program is easy to use, requires little maintenance and provides us protection against E&O. The integration between dokXP and sigXP allows us to scan high quality digital images and easily links them into sigXP with just a few quick steps. It helped us improve our internal processes in both personal and commercial lines, resulting in a more efficient working environment. Our team really enjoys working in a paper-free environment, and we encourage all brokers to learn more about this solution.”
